

# **LAB 1, INTRODUCTION TO JAVA AND ECLIPSE**

## **JAVA FUNDAMENTALS**

# Lab 1, Introduction to Java and Eclipse

## Objective

In this lab you will

- Create a Console program using the Eclipse IDE
- Run the program

## Overview

Eclipse is the development tool used by many Java developers and throughout this course. This lab will show you how to create and run a Java program.

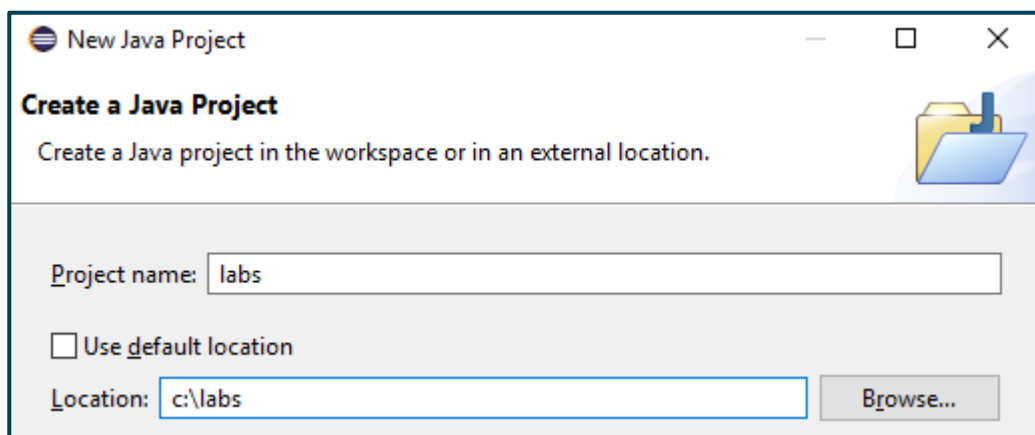

## Step by step

### Creating a new Java application

1. Launch Eclipse and type C:\Labs as the location for your 'workspace'.
2. Dismiss the Welcome window.
3. Choose menu option File > New > Java Project

4. Type the following project name and location and then accept the other default settings::

5. Click 'Finish'
6. Right click on the lab1 folder in your project explorer and then select

New > Package

name this package **lab01**

7. Right click on the **lab01** node and then select New > Class

Name this class **Program**

A screenshot of the 'New Class' dialog box in Eclipse. The 'Name' field is highlighted and contains the text 'Program'.

And make sure you select

A screenshot of the 'New Class' dialog box showing the 'public static void main(String[] args)' checkbox selected.

## Writing the Code

8. In the Program class's main method type the following:

```
public static void main(String[] args) {  
    System.out.println("Hello, world!");  
}
```

9. In the line below the `System.out.println`, type 'sys' and hit **Ctrl-Space** you'll find that *Content Assist* pops up a list of candidate.

Choose the entry **sysout** and then hit **Ctrl-Space**. The first entry in the context menu will type `System.out.println`.

Inside the parentheses type the String "My name is --" fill the -- with your name

Make sure you make full use of this time saving editor command.

## Building and running the program

10. Compiling the program is done by saving your code (Ctrl-s)
11. Press **Ctrl+F11** to run the program or click the green Run icon.

A Console window will become active at the bottom of Eclipse.  
Please view the output for the *println* messages.

**\*\* End \*\***
